Navigating with a Coordinated School Health Framework

Why go this route?

• The health of young people and their academic success is inextricably intertwined. Students who are not healthy or do not feel safe at school understandably struggle to succeed. But a healthy, safe, and supportive school environment helps students and staff members do their best work and achieve the primary mission of schools, which is to educate students.

• Utilizing a coordinated school health framework is an efficient means of supporting student learning and school success by increasing student connectedness, helping students establish lifelong healthy behaviors, engaging parents, families and communities, and leveraging resources.

You’ll know you’ve arrived when...

• Students and staff in your school feel physically and emotionally safe, supported, and challenged. Students are learning how to make healthy choices and practicing those choices daily because healthy food is always available and opportunities for physical activity occur throughout the day. Families and community members are involved in the schools. The physical environment of the school buildings and surroundings are welcoming, clean, and safe.

• The School Improvement Team includes a coordinated school health group and both speak the same language. Decisions are data driven and curricula, programs, and initiatives implemented within the school have been proven effective or are research-based. School health initiatives are woven into school improvement plans.

Potential COSTS

• The cost of implementing coordinated school health will depend on the actions selected by the team. Many positive changes can be made with minimal cost.

• Coordinated school health involves the community in school health initiatives and leverages resources that reduce the cost to the district.
The Process

**NOTE:** Steps marked with a blue circle are accompanied by one or more inserts, included in this packet.

1. **Form a Coordinated School Health Council**
   The Coordinated School Health Council should include representatives from all eight components of coordinated school health, including parents and students. A team leader should be selected to lead the group and keep it organized. Administrative buy-in is essential. See INSERT for Step 1.
   a. Create a Vision and Mission
   b. The Eight Components of Coordinated School Health (CSH)

2. **Assess Needs and Resources**
   INSERT for Step 2 provides examples of ways to assess your school’s needs and resources to support them.
   a. Student data – MiProfile for Healthy Youth (MiPHY)
   b. School data – Healthy School Action Tools (HSAT); Staff Surveys
   c. District data – Healthy School Report Card (HSRC)
   d. Parent/Family Data – Parent Surveys
   e. State-level Data – School Health Policies and Practices (SHPPS); Profiles
   f. Community Resources – Community Meetings

3. **Create an Action Plan**
   INSERT for Step 3 details the steps involved in creating an action plan.
   a. Data driven decision-making (prioritize highest needs)
   b. Work plans and SMART Goals
   c. Address the Eight Components of Coordinated School Health
      - Nutrition Services
      - Family and Community Involvement
      - Healthy School Environment
      - Counseling, Psychological and Social Services
      - Health Services
      - Physical Education
      - Health Education
      - Health Promotion for Staff
   d. Connect to School Improvement Plan – Coordinated School Health IS School Improvement
   e. Communicate your Plan

4. **Implement Plan**
   Now that you have created a Coordinated School Framework, put it into practice.

5. **Evaluate Impact.**
   Adjust the plan as needed, addressing additional components of coordinated school health. After determining the impact of your plan you should adjust your plan as needed. If your actions are showing progress or have succeeded you may move to address additional components of coordinated school health.

6. **Celebrate Progress!**
   INSERT for Step 6 gives suggestions about how to ‘toot your own horn’ and make sure people know about your school’s successes, no matter how small they are!

7. **Re-Assess Needs and Resources**
Getting more mileage from...

How coordinated school health benefits your school in regard to the following initiatives:

Elementary and Secondary Education Act (ESEA)

- ESEA emphasizes a complete, well-rounded education for all students. It also promotes innovation and continuous improvement that will support student success. The emphasis is to invest in models that keep students safe, supported, and healthy both in and out of school, and that support strategies to better engage families and community members in their children's education. Schools are also required to collect data on school climate. The resources in this packet will assist schools and districts in developing a Coordinated School Health Team that will better help schools address these initiatives.

State Accreditation System

- Your school’s outcome on the Comprehensive Needs Assessment (CNA) can reflect ideas and strategies developed by following a coordinated school health process. The CNA includes questions from the Healthy School Action Tools (HSAT) and questions regarding participation in the Michigan Profile for Healthy Youth (MiPHY).

Michigan Continuous School Improvement Process (Mi-CSI) Michigan School Improvement Framework

The coordinated school health framework correlates to and supports the School Improvement Framework with initiatives falling within all five strands. Coordinated School Health can be seamlessly incorporated into the entire school improvement process. The CNA now includes questions regarding school health. Your school’s outcome on the CNA can reflect ideas and strategies developed in this coordinated school health process.
