

Getting started with MI-Map is as easy as 1,2,3

1 Familiarize yourself with the structure shared in all of the packets.

The inside cover of this introduction shows common elements for quick browsing of any packet.

2 Check out the large clusters of packets.

The index on this page lists major sections. Individual pages inserted in this wrapper give you more detail about how they fit into the MI-Map journey. Individual packets are listed for each section.

3 Use the Michigan Continuous School Improvement Process to determine where to begin!

As the School Improvement Team begins to gather data and determine your school's needs, they might identify packets to assist with the process such as, gathering and analyzing data, organizing processes, implementing and monitoring strategies, and measuring student progress. MiMap packets can also be used directly to assist the staff with their work.

MiMap provides practical strategies and materials to shape, support, and sustain system-wide innovation and continuous school improvement.
