Question 1: The RFP for the I-696 Slope Restoration project lists a secondary prequalification for Landscape Architecture. Could you please clarify the level of effort that you anticipate from the Landscape Architect? Do you see this individual being onsite full time during planting or more as a part time support person to the inspection staff?

Answer 1: We were looking for this/these people to be part time support to the inspection staff. We would expect them to spot check the removal/clearing, herbicide application, pneumatic compost application, plant layout, and planting process. Though they won't be expected to be on site at all times, we do want them available to answer questions and provide recommendations at all times.

The one area this person would be heavily involved in is tagging trees at the nursery and/or accepting or rejecting landscape material as it arrives at the job site. Also they will be involved in inspecting plants at the end of the growing season. A qualified Horticulturist is preferred for this work.
