

**SCOPE OF SERVICES  
DESIGN SERVICES – QUESTIONS & ANSWERS**

ITS Control & Equipment Room Design – Grand Region  
JN 100611

Question: We have some questions regarding how this project interfaces with the DMB Facility TMC design project. Both projects seem to include the following:

1. Control Room functional requirements
2. Control Room planning and layout
3. Furniture design
4. Equipment Room planning and layout

Answer: **Both contracts include a level of planning and functional requirement development. The DMB Facility contract will focus on the level of functionality that defines the general space, utility needs, and furniture layout. The MDOT TMC equipment contract will further refine the operational functional requirements to define the technical and system needs of the TMC operations.**

**The intention is for the MDOT TMC equipment contract to build on and further refine the functional requirements to the level needed to specify the electronics, other equipment and materials, system operations, and integration needed for a functional control and equipment room.**

**There will be interaction between the two contracts, during both design and construction, as they are basically two phases of the same project.**

**The furniture design will be provided by the DMB facility contract.**

**The Equipment Room facility and environmental controls will be designed by the DMB facility project, and the equipment room specifications and integration plan will be developed by the MDOT TMC project.**

**Please see the revised version of the Scope of Services for edits made to correct and clarify the services related to this Q&A.**
