

MATERIALS SOURCE GUIDE

January 2025

CONSTRUCTION FIELD SERVICES
DIVISION

Foreword

This manual has been prepared to give information and guidance to personnel associated with sampling, testing and inspection of materials used in Michigan Department of Transportation projects. Its purpose is to supplement the Materials Quality Assurance Procedures (MQAP) Manual, Hot Mix Asphalt (HMA) Production Manual, Procedures for Aggregate Inspection, Density Control Handbook, and the Michigan Construction Manual to standardize procedures and assure adequate, uniform quality control.

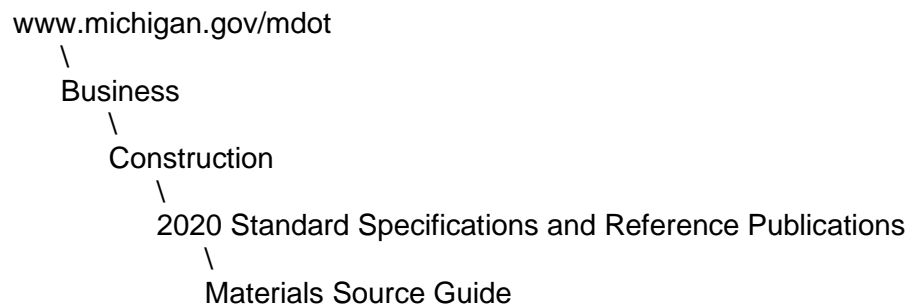

Buy America step certification is required for pay items and materials as listed in the document located [here](#). Please also review the Special Provision for Source of Steel and Iron (Buy America), 20SP105(A) and the Special Provision for Source of Construction Materials, 20SP105(B) available under the heading of MDOT Supplemental Specs and Special Provisions (SS/SP) through the [MILogin](#) system.

For copies of the most recent Materials Source Guide you can:

Download from the internet at web address:

https://www.michigan.gov/mdot/0,4616,7-151-9622_11044_11367_68095---,00.html

Or Navigate by:

Periodically check the website for updates to the Materials Source Guide. Updated guides can be downloaded and printed.

This manual is in accordance with [the 2020 Standard Specifications for Construction](#).

Definitions

(References to the Materials Quality Assurance Procedures Manual-MQAP)

Basis of Acceptance: Refers to the method by which materials incorporated into MDOT projects are accepted. Below is a list of all the current Basis of Acceptance methods used by MDOT for acceptance of materials.

- Visual Inspection (VI): (See MQAP Section 1.06) Materials which may be visually inspected by MDOT personnel for acceptance or rejection. When a maximum VI limit is given for materials with another specified basis of acceptance, materials may be accepted by VI up to maximum VI quantities as indicated for that material, per item, per contract. (NOTE: All materials should be visually inspected prior to incorporation into the job without quantity limit, and may be rejected on that basis even though material may be acceptable on another basis.)
 - Qualified Product List (QPL): (See MQAP Section 5.01) Products that have been tested and/or evaluated by MDOT and found to meet performance and/or other specification requirements. A Qualified Products List (QPL) of these products is maintained within this document. All QPL materials must be documented per Section 5.01 of the MQAP.
- General Certification (Gen Cert): (See MQAP Section 2.01) When this certification is specified as the basis of acceptance in the contract documents, it must be provided in accordance with Section 2.01 of the MQAP. A general certification must include a general description of the material(s), a list of the applicable specifications (ASTM, AASHTO, MDOT or other designations as appropriate), and a statement that the material(s) conforms to these specifications.
- Test Data Certification (Test Data Cert): (See MQAP Section 2.01) When this certification is specified as the basis of acceptance in the Materials Acceptance Requirements Table, in addition to the requirements of a General Certification, the certification must also include laboratory test report(s) for samples obtained from the same lot(s), batch, heat, etc. of material represented by the certification and tested according to applicable specifications (ASTM, AASHTO, MDOT).
- Approved Manufacturer (Appr Mfr): (See MQAP Section 2.02) A manufacturer who has submitted quality control documentation and/or material samples, and has been given approval status to certify specific material(s). General Certification per the requirements of Section 2.01 of the MQAP must accompany all Approved Manufacturer shipments to either an Approved Supplier location or the MDOT project site. Strict adherence to the requirements for Certification Documentation and Distribution is required of all Approved Manufacturers.
 - Approved Supplier: (See MQAP Section 2.02) When Approved Manufacturer is specified as the basis of acceptance in the contract documents, the material must be supplied by the manufacturer or, without modification to the material, by an Approved Supplier. An Approved Supplier must recertify Approved Manufacturer material(s). Strict adherence to the requirements for Certification Documentation and Distribution is required of all Approved Suppliers for the recertification of material(s). All original Approved Manufacturer General Certification(s) must accompany the material(s) shipment to the MDOT project site. When Approved Manufacturer is specified, a supplier may not distribute or recertify material(s) unless they have been granted Approved Supplier status.

- Special Provision: Revisions and additions to the Standard and Supplemental Specifications applicable to an individual project. Special Provisions have been reviewed and approved for use by MDOT. Materials acceptance may be defined by these documents included in the project proposals.
- Fabrication Inspection (Fabrication Inspection): Materials subjected to Fabrication Inspection are those that are typically manufactured offsite and shipped to the project. Refer to the proper subsection of the Structural Fabrication Quality Manual (SFQM) to find the requirements of the various Fabrication Inspections currently performed by MDOT.
- Acceptance Testing (Test): Sampling and testing of a material to determine compliance with specification requirements prior to incorporation into the project. Acceptance testing is the required basis of acceptance for some materials, as indicated in the contract documents, but may be applied to all materials regardless of the basis of acceptance.

Other Definitions

Manufacturer: A producer or fabricator of materials with control over the quality, workmanship and handling of material.

Supplier: A supplier has no control, other than through careful handling, over the quality and workmanship of material.

Certification Documentation (See MQAP Section 2.01)

Where more than one piece of paper is included in the certification document, all pages must be numbered (__ of __) and include Contract I.D. in order to reunite them should they become separated.

Stencil, stamp, or otherwise mark all certified material prior to delivery to a supplier or project. This mark must identify the AASHTO, ASTM, or MDOT specification that the material meets, to allow the material to be recognized and checked against the certification document.

General Certification – This documentation must consist of all of the following:

- Company name, address and contact information.
- Date the certification was produced.
- Contract number (Control Section/Job Number).
- Name of contractor.
- If material is certified by a supplier or Contractor, the manufacturer's name must be included on the certification.
- A list of all applicable specifications (ASTM, AASHTO, MDOT or other designations as appropriate) which the material is certified to meet.
- Any applicable specification modifier such as class, grade, type, etc.
- Name of material (MDOT designation and Spec Number).
- Identification markings on shipment as required by the General Materials Certification Procedures, in the Quality Assurance Procedures Manual, Section 2.01.03.B.

- A statement, signed by a responsible representative of the manufacturer, supplier, or Contractor that the material represented by the certification meets all MDOT listed specification requirements.

Test Data Certification - When this certification is specified as the basis of acceptance in the Materials Acceptance Requirements Table, in addition to the requirements of a General Certification, the following information must also be included:

- Laboratory test report(s) for samples obtained from the lot(s) of material represented by the certification and tested according to applicable specifications (ASTM, AASHTO, MDOT).

Certification Distribution

All certification documents except those issued by Approved Manufacturers/Approved Suppliers must be distributed as follows: Submit to the Construction/Project Engineer. The Contractor is ultimately responsible for all materials documentation distribution to the Project Engineer's office.

Approved Manufacturer/Approved Supplier Certifications must follow the above distribution requirements with the addition of one a copy being mailed or emailed on the date of shipment to:

Michigan Department of Transportation
Construction Field Services Division
Materials Control
P.O. Box 30049
Lansing, Michigan 48909
Facsimile: (517) 322-5664
Email: MDOT-MaterialsControl@michigan.gov

Certifications and Recertification

Information required on certifications may vary from one material to the next. The following examples of certification documents are only provided for reference.

Materials Source List (See MQAP Section 1.04)

A completed and signed Materials Source List (Form 501) is required project documentation, and required for payment of associated items of work. The Materials Source List is not a substitute for other required material quality control and quality assurance documentation. Prime contractors are responsible for accurate submission of the Materials Source Lists for all materials including their subcontractors.

[Clear Form](#)

MATERIALS SOURCE LIST

INSTRUCTIONS: Use the "[Materials Source Guide](#)" for material name and specification number. Enter "SP" for MDOT SPEC NUMBER for materials specified by special provision. To avoid delays, submit as soon as possible. No testing of materials will be conducted until the Engineer has been notified. Contractor to submit form to Engineer in ProjectWise Contractor Inbox. The Engineer will populate the remaining fields and distribute to Region/Transportation Service Center (TSC) Materials Supervisor.

Distribution: Submit to the Construction/Project Engineer. Submit one additional Copy mailed or emailed to Construction Field Services Division, MDOT, P.O. BOX 30049, LANSING, MI 48909, or via email to MDOT-MaterialsControl@michigan.gov , complete on date of material Shipment.

Materials Acceptance Requirements Table Definitions

Sampling Frequency: (If Required) Amount of material or number of items, as defined in the Materials Acceptance Requirements Table or other contract documents, which require a sample when submitting material to the Construction Field Services Division for testing.

Size of Sample: Minimum size of sample required for testing as defined in the Materials Acceptance Requirements Table or other contract documents.

Maximum VI Quantity: Maximum amount of material which can be accepted by visual inspection for each material, per item, per project.

Remarks: Special notes pertaining to individual materials.

Special Instructions: More detailed information pertaining to particular types of materials, and referenced in "Remarks" or listed in the Materials Source Guide.

Note: When the Basis of Acceptance is not "Test", the sampling criteria provided may be used as guidance if the Project/Construction Engineer determines there may be a problem with the material and requests sampling and testing.

Materials Acceptance Requirements

See Miscellaneous area at the end of table for materials deleted from the 2020 Standard Specifications for Construction.

* Must be tested unless provided by an Approved Manufacturer.

** When the Basis of Acceptance is not "Test", the sampling criteria below may be used when there are concerns with material quality.

| Spec. No. and Material Name | Basis of Acceptance | Sample Frequency If Required by the Engineer* | Sample Size | Maximum VI Quantity | Remarks (QPL Reference) |
|---|---------------------|---|-------------|---------------------|--|
| 401.03E End Section Grate for Culverts | VI | - | - | - | See Standard Plans for Sizes. |
| 401.03E Precast Concrete Headwalls | Gen Cert | - | - | - | 24" or less. For larger than 24" construct per Section 706 of Standard Specifications. |
| 404.02C Underdrain Outlet Endings | VI | - | - | - | See Standard Plans. |
| 501.02 Asphalt, Release Agents | VI | - | - | - | |
| NOTE: Must be approved by the project engineer. No fuel or oil-based agents. | | | | | |
| 603.03B2 Adhesive Systems for Grouting Dowel Bars and Tie Bars for Full-Depth Concrete Pavement Repairs | VI See Remark | - | - | - | Must be a Qualified Product (603.03B2). |
| Note: Use for grouting to existing concrete in the same direction of traffic in the same lane as the repair. For grouting lane ties (deformed bars positioned transverse to the direction of traffic located between traffic lanes) select from Adhesive Anchor Systems for Structural Anchors and Lane Ties (712.03J). | | | | | |
| 706.03K4 Expansion Joint Devices for Bridges | See Remark | - | - | - | See project plans for list of approved devices and details. |
| 706.03S Penetrating Water Repellent (Protective Coating for Concrete) | VI See Remark | - | - | - | Must be a Qualified Product (706.03S). |

Materials Acceptance Requirements

See Miscellaneous area at the end of table for materials deleted from the 2020 Standard Specifications for Construction.

* Must be tested unless provided by an Approved Manufacturer.

** When the Basis of Acceptance is not "Test", the sampling criteria below may be used when there are concerns with material quality.

| Spec. No. and Material Name | Basis of Acceptance | Sample Frequency If Required by the Engineer* | Sample Size | Maximum VI Quantity | Remarks (QPL Reference) |
|---|------------------------|---|-------------|---------------------|---|
| 707.02 Bushings for Pins and Link Plates | VI See Remark | - | - | - | Must be a Qualified Product (707.02). |
| 708.01 Structural Prestressed Concrete Construction | Fabrication Inspection | - | - | - | See Chapter 5 of the SFQM for Precast Concrete Beam Approved Supplier List. See subsection 2.2. of the SFQM for fabrication inspection procedure. See Special Instructions. |
| 710.03D Waterproofing Shotcrete | VI | - | - | - | |
| 712.03A1c Abrasive, Low Dusting | Gen Cert | - | - | - | See Section 715.02. |
| 712.03D Epoxy Mastic | VI | - | - | - | |
| 712.03J Adhesive Anchor Systems for Structural Anchors and Lane Ties | VI See Remark | - | - | - | Must be a Qualified Product (712.03J). |
| 712.03K Structure Expansion Anchors (Mechanical Expansion Anchors) | VI See Remark | - | - | - | Must be a Qualified Product (712.03K). Pull-out testing is required see MQAP Manual Section 3.03. |

Materials Acceptance Requirements

See Miscellaneous area at the end of table for materials deleted from the 2020 Standard Specifications for Construction.

* Must be tested unless provided by an Approved Manufacturer.

** When the Basis of Acceptance is not "Test", the sampling criteria below may be used when there are concerns with material quality.

| Spec. No. and Material Name | Basis of Acceptance | Sample Frequency If Required by the Engineer* | Sample Size | Maximum VI Quantity | Remarks (QPL Reference) |
|---|---------------------|---|-------------|---------------------|---|
| 712.03L Mechanical Reinforcement Splicing | VI See Remark | 1 per project | 2 splices | - | See Special Instructions . Must be a Qualified Product (712.03L). |
| 712.03X Grout Under Masonry Plates | VI | - | - | - | |
| 712.03Y Embedded Galvanic Anodes | VI See Remark | - | - | - | Must be a Qualified Product (712.03Y). |
| 713.02B Sealant for Perimeter of Beam Repairs | VI See Remark | - | - | - | Must be a Qualified Product (713.02B). |
| 715.02 Coating Systems for New Hanger Assemblies | VI See Remark | - | - | - | Must be a Qualified Product (915). |
| 715.02 Abrasive, Low Dusting | VI See Remark | - | - | - | Must be a Qualified Product (715.02). |
| 715.02 Abrasive, Steel Grit | VI | - | - | - | Verify uniform profile after blasting of 1 to 2.8 mils per SSPC. |
| 716.02 Abrasive, Low Dusting | VI See Remark | - | - | - | See Section 715.02 . |

Materials Acceptance Requirements

See Miscellaneous area at the end of table for materials deleted from the 2020 Standard Specifications for Construction.

* Must be tested unless provided by an Approved Manufacturer.

** When the Basis of Acceptance is not "Test", the sampling criteria below may be used when there are concerns with material quality.

| Spec. No. and Material Name | Basis of Acceptance | Sample Frequency If Required by the Engineer* | Sample Size | Maximum VI Quantity | Remarks (QPL Reference) |
|---|------------------------|---|-------------|---------------------|---|
| 803.02B Detectable Warning Surfaces | VI See Remark | - | - | - | Must be a Qualified Product (803.02B). |
| 804.01 Glare Screen | VI | - | - | - | Included in Concrete Spec. |
| 808.03C Temporary Fence Materials | VI | - | - | - | |
| 810.03O Bridge Sign Connections | Fabrication Inspection | - | - | - | See Chapter 5 of the SFQM for Steel Highway Structure Approved Suppliers List. See subsection 2.4 of the SFQM for fabrication inspection procedure. |
| 811.03D1 Waterborne, Liquid Pavement Marking Materials | VI See Remark | - | - | - | MQAP Manual Section 5.13. Must be a Qualified Product (811.03D1). |
| 811.03D2 Low Temperature Waterborne, Liquid Pavement Marking Materials | VI See Remark | - | - | - | MQAP Manual Section 5.13. Must be a Qualified Product (811.03D2). |
| 811.03D3 Regular Dry Paint, Liquid Pavement Marking Materials | VI See Remark | - | - | - | MQAP Manual Section 5.13. Must be a Qualified Product (811.03D3). |

Materials Acceptance Requirements

See Miscellaneous area at the end of table for materials deleted from the 2020 Standard Specifications for Construction.

* Must be tested unless provided by an Approved Manufacturer.

** When the Basis of Acceptance is not "Test", the sampling criteria below may be used when there are concerns with material quality.

| Spec. No. and Material Name | Basis of Acceptance | Sample Frequency If Required by the Engineer* | Sample Size | Maximum VI Quantity | Remarks (QPL Reference) |
|--|--------------------------|---|-------------|---------------------|---|
| 811.03D4 Cold Plastic Tape, Preformed Pavement Marking Material | VI See Remark | - | - | - | MQAP Manual Section 5.14. Must be a Qualified Product (811.03D4). |
| 811.03D5 Thermoplastic Liquid Pavement Marking Materials | VI See Remark | - | - | - | MQAP Manual Section 5.13. Must be a Qualified Product (811.03D5). |
| 811.03D5 Thermoplastic, Blocks Rumble Strips and Snowmobile Crossings | VI See Remark | - | - | - | MQAP Manual Section 5.13. Must be a Qualified Product (811.03D5). |
| 811.03D6 Thermoplastic, Sprayable, Liquid Pavement Marking Materials | VI See Remark | - | - | - | MQAP Manual Section 5.13. Must be a Qualified Product (811.03D6). |
| 811.03D7 Polyurea, Liquid Pavement Marking Materials | VI See Remark | - | - | - | MQAP Manual Section 5.13. Must be a Qualified Product (811.03D7). |
| 811.03D8 Modified Epoxy, Liquid Pavement Marking Materials | VI See Remark | - | - | - | MQAP Manual Section 5.13. Must be a Qualified Product (811.03D8). |
| 811.03D9 Preformed Thermoplastic, Preformed Pavement Marking Material | VI See Remark | | | | MQAP Manual Section 5.14. Must be a Qualified Product (811.03D9). |
| 901 Cement | Aprr Mfr | See Remark | 10 lb | 45 ton | See Special Instructions , see MQAP Manual Section 2.06. |

Materials Acceptance Requirements

See Miscellaneous area at the end of table for materials deleted from the 2020 Standard Specifications for Construction.

* Must be tested unless provided by an Approved Manufacturer.

** When the Basis of Acceptance is not "Test", the sampling criteria below may be used when there are concerns with material quality.

| Spec. No. and Material Name | Basis of Acceptance | Sample Frequency If Required by the Engineer* | Sample Size | Maximum VI Quantity | Remarks (QPL Reference) |
|---|-----------------------|---|---------------------------|---------------------|---|
| 911 Water | Test See Remark | 1 per source | 1 qt | - | Water approved for drinking by the Michigan Dept of Public Health may be used without sampling and testing. |
| 912.05 Structural Timber and Lumber | Appr Mfr * | Each Charge | 22 cores See Remark | - | 48 cores if treatment is creosote. |
| 912.06 Timber Piles | VI | - | - | - | |
| 912.07B Treated Wood; Fence Posts, Guide Posts, Guard Posts and Mail Box Posts | VI | - | - | - | |
| 912.08 Wood Posts and Blocks for Guardrail and Highway Signs (Dimension Sawed) | Appr Mfr * | Each Charge | 22 cores | - | Cedar post need not be treated. |
| 912.08Q Recycled Plastic or Rubber Guardrail Offset Blocks | VI See Remark | - | - | - | Must be a Qualified Product. May only be used on Steel Posts (912.08Q). |
| 912.09 Timber for Rustic Construction | Gen Cert | - | - | - | |

Materials Acceptance Requirements

See Miscellaneous area at the end of table for materials deleted from the 2020 Standard Specifications for Construction.

* Must be tested unless provided by an Approved Manufacturer.

** When the Basis of Acceptance is not "Test", the sampling criteria below may be used when there are concerns with material quality.

| Spec. No. and Material Name | Basis of Acceptance | Sample Frequency If Required by the Engineer* | Sample Size | Maximum VI Quantity | Remarks (QPL Reference) |
|---|---------------------|---|-------------|---------------------|---|
| 913.03 Clay and Sand Lime Brick and Block | Test | 1 per 250,000 or fraction thereof | 6 pcs | 1000 pcs | |
| 913.03C Concrete Brick | Test Data Cert | See Remark | 6 pcs | 1000 pcs | 1 from each 10,000 bricks or fraction thereof; 2 from lots more than 10,000 to 100,000; 3 from each lot over 100,000. |
| 913.05 Concrete Block | Test Data Cert | See Remark | 4 pcs | 1000 pcs | One from lot of 10,000 or fraction thereof; 2 from lots more than 10,000. |
| 913.06 Precast Reinforced Concrete Units for Drainage Structures (Tops, Risers and Sump Bases) | Appr Mfr * | 1 percent per size | See Remark | 10 pcs total | Submit QA cylinder test results and core samples. Submit sample 1-3 sq.in. from wall of unit if absorption is required. |
| 913.06 Precast Drainage Structure Adjusting Rings | Gen Cert | - | - | - | |
| 913.07 Precast Concrete Bases, for Drainage Structures | Appr Mfr * | 5 percent of total | - | 10 pcs total | |
| 913.08 Structural Tile | Test | 1 per proj. | 6 tiles | 1000 tiles | |

Materials Acceptance Requirements

See Miscellaneous area at the end of table for materials deleted from the 2020 Standard Specifications for Construction.

* Must be tested unless provided by an Approved Manufacturer.

** When the Basis of Acceptance is not "Test", the sampling criteria below may be used when there are concerns with material quality.

| Spec. No. and Material Name | Basis of Acceptance | Sample Frequency If Required by the Engineer* | Sample Size | Maximum VI Quantity | Remarks (QPL Reference) |
|---|---------------------|---|-----------------|---------------------|---|
| 913.09 Slope Pavement Blocks | Apr Mfr * | 1 per 25,000 | 6 blocks | 1000 pcs | |
| 914.03 Bituminized Fiber Joint Filler | Test Data Cert | 1 per 1000 sft or fraction thereof | 2 ft See Remark | 150 sft | Sample for structure to be at least 5 in. wide. ¼ in. filler need not be sampled. |
| 914.03B Recycled Rubber Joint Filler | VI See Remark | - | - | - | Must be a Qualified Product (914.03B). |
| 914.03C Closed-Cell Polypropylene Foam | Test Data Cert | 1 per 1000 sft or fraction thereof | 2 ft See Remark | 150 sft | Sample for structure to be at least 5 in. wide. ¼ in. filler need not be sampled. |
| 914.04A Hot-Poured Joint and Crack Sealant | VI See Remark | - | - | - | Must be a Qualified Product (914.04A). |
| 914.04B Backer Rod for Use with Hot-Poured Joint Sealant | VI | - | - | - | |
| 914.04C HMA Crack Treatment and Overband | VI See Remark | - | - | - | Must be a Qualified Product (914.04C). |
| 914.05 Joint Spall Repair Materials | See Remark | - | - | - | See contract documents as applicable. |

Materials Acceptance Requirements

See Miscellaneous area at the end of table for materials deleted from the 2020 Standard Specifications for Construction.

* Must be tested unless provided by an Approved Manufacturer.

** When the Basis of Acceptance is not "Test", the sampling criteria below may be used when there are concerns with material quality.

| Spec. No. and Material Name | Basis of Acceptance | Sample Frequency If Required by the Engineer* | Sample Size | Maximum VI Quantity | Remarks (QPL Reference) |
|---|------------------------------|---|----------------|---------------------|---|
| 914.06 Epoxy Resin Adhesive and Temporary Seal (Crack Injection) | VI See Remark | - | - | - | Must be a Qualified Product (914.06). |
| 914.07 Transverse Pavement Joints 1. Dowel Bars | Appr Mfr | - | 1 bar | 1200 bars | Bond Release Agent must be a Qualified Product (914.07A). See Special Instructions 914.07. Field Inspection required, MQAP Manual Section 3.04. See Special Instructions 914.07. |
| 2. Dowel Baskets (Load Transfer Assemblies) | Appr Mfr | - | Full size unit | 100 assemblies | |
| 914.07A Coatings for Dowel Bars 1. Epoxy Coating Companies | Appr Mfr * | 1 per project per mfr | 1 bar | 240 bars | Epoxy Coating must be a Qualified Product (914.07A2). Must be a Qualified Product (914.07A3). |
| 2. Epoxy Coating Material | VI See Remark | - | - | - | |
| 3. Bond Release a. Bituminous Material b. Alternate Bond Release Agents | Gen Cert VI See Remark | - - - | - - - | 20 gal max - | |

Materials Acceptance Requirements

See Miscellaneous area at the end of table for materials deleted from the 2020 Standard Specifications for Construction.

* Must be tested unless provided by an Approved Manufacturer.

** When the Basis of Acceptance is not "Test", the sampling criteria below may be used when there are concerns with material quality.

| Spec. No. and Material Name | Basis of Acceptance | Sample Frequency If Required by the Engineer* | Sample Size | Maximum VI Quantity | Remarks (QPL Reference) |
|--|--------------------------------|---|-------------|---------------------|---|
| 914.07C Dowel Bar Expansion Caps | VI | - | - | - | Caps must conform to Standard Plan R-40 Series. |
| 914.08 End-of-Pour Joint Devices | VI | - | - | - | |
| 914.08 Deformed Bars 1. Bars 2. Epoxy Coating | Appr Mfr * VI See Remark | 1 per project per mfr | - | 500 lb | Epoxy Coating must be Qualified Product (905.03C). |
| 914.09 Straight and Bent Tie Bars for Longitudinal Pavement Joints (Lane Ties) 1. Bars 2. Epoxy Coating | Appr Mfr * VI See Remark | 1 per project per mfr | 2 bar | 500 lb | Epoxy Coating must be a Qualified Product (905.03C). |
| 914.10 Bolts for Structure Expansion Anchors | Gen Cert | - | - | - | |
| 914.11 Preformed Waterproofing Membrane and Joint Waterproofing Membrane | VI See Remark | - | - | - | Must be a Qualified Product (914.11). Do not use on Treated Wood Materials. |
| 914.12A Elastomeric Bearings | Gen Cert | - | - | - | |

[Mat.](#)

Special Instructions

708.01 Prestressed Concrete

Fabrication inspection is required for all prestressed miscellaneous bridge products, prestressed straight-strand bridge beams, and prestressed deflected-strand bridge beams. The following steel components incorporated into prestressed concrete beams do not require fabrication inspection: dowel bars and sole plates.

712.03L Mechanical Reinforcement Splicing

The contractor must make test splices, witnessed by the Engineer, on the largest bar sizes that are to be spliced. Test splice consists of 2 pieces of reinforcing bar joined by the coupler with 12 inches of bar exposed on each end of the coupler.

901 Cements and Fly Ash

Samples of fly ash and slag cement must be accompanied by a sample of the Portland cement with which it is being used. The plastic lined cement sample bags furnished by the laboratory will hold 10 pounds when full.

902 Prequalified Aggregate Suppliers

Quality Assurance tests will be conducted by Department personnel at the frequencies stated in Chapter 3 of the MDOT Aggregate Supplier Program, found in the Procedures for Aggregate Inspection Manual.

904.03A Asphalt Binder for HMA Mixtures

If the Asphalt Binder is supplied from a source currently on the Approved Asphalt Binder Certifier List, a certification meeting the requirements of Section 2.04.05 of the Materials Quality Assurance Procedures Manual is required. See the contract documents for sampling, acceptance, and daily monitoring requirements.

If the binder is supplied from a source that is not currently shown in the Approved Asphalt Binder Certifier List, the asphalt binder must be sampled, tested, and approved for use prior to incorporation into the project. See contract documents for sampling, acceptance, and monitoring requirements.

See [Current List](#) of Asphalt Binder Certifiers at Construction Field Services Web Page.

Instructions to MDOT Construction web page: From MDOT home page (michigan.gov/mdot), click on Business (top), then click on Construction (left side), and then click Go to Construction. The Approved Asphalt Binder Certifier List is under Resources heading.

904.03C Emulsified Asphalt

Size of Sample – For CV Sampling see Section 2.05.06 of the Materials Quality Assurance Procedures Manual. For all other sampling see contract documents for criteria. Submit the samples in plastic containers only.

905.03 Bar Reinforcement (Uncoated)

Sample size must be 2 pieces, one 24 in. and one 36 in. Sample ID must include the name of the bar manufacturer, lot number, and heat number. Mill Cert must be attached to the Sample ID form.

905.03C Bar Reinforcement (Epoxy Coated)

Sample size must be 2 pieces, one 24 in. and one 36 in. Sample ID must include the name of the epoxy coating company, epoxy resin trade name, name of bar manufacturer, lot number, and heat number. Mill Cert must be attached to the Sample ID form. Epoxy coating must be a Qualified Product (905.03C).

905.06 Welded Steel Wire Reinforcement

Sample size must be one-piece, full width of fabric with two transverse wires. Longitudinal wires must extend 6 in. to 8 in. either side of transverse wires. Sampling not required when larger wire is less than 0.13 in. (w1.5) in dia. Include on sample ID the size that the wires are supposed to be. Sample may be folded or cut into approx. 3 ft. sections. If cut, pieces should be wired together and identified. Mill Cert must be attached to the Sample ID form.

905.07 Strand for Prestressed Concrete

Do not obtain sample from within 5 feet of the end of the reel. Mill Cert must be attached to the Sample ID form.

905.08 Tendons for Post Tensioning of Box Beams – Prestressing Strand

Do not obtain sample from within 5 feet of the end of the reel. Mill Cert must be attached to the Sample ID form.

906.04 Structural Steel

Fabrication inspection is required for all main and secondary bridge member pay items listed in 707.04.

Fabrication inspection is required for structural steel and pipe bridge railing pay items listed in 711.04.

Fabrication inspection is required for the following structural steel bridge rehabilitation pay items listed in 713.04: pin and hanger replacement, bearing stiffeners at temporary supports, retrofit structural steel, and structural steel welded repairs.

The following structural steel components do not require fabrication inspection: plate washers and pier nosing.

906.07 High Strength Steel Bolts

An assembly is typically a combination of a bolt, nut, and washer but may be any combination of a bolt, nut, washer, lock washer, etc. depending on the project specifications. Mill Certs must be included for each component of the assembly and be attached to the Sample ID form. Plate washers are not required to be sampled and tested.

907.04C Steel Chain Link Fence-Posts for Fence and Gates

An alternative zinc/clear coat system will be allowed for pipe sections only. This alternative coating system shall comply with subsection 907.03D of the Standard Specifications for Construction.

907.04C Steel Chain Link Fence-Top Rail, Horizontal Rail

An alternative zinc/clear coat system will be allowed for pipe sections only. This alternative coating system shall comply with subsection 907.03D of the Standard Specifications for Construction.

908.09C Tubing, Steel Railings (Hardware)

An assembly is typically a combination of a bolt, nut, and washer but may be any combination of a bolt, nut, washer, lock washer, etc. depending on the project specifications. Plate washers are not required to be sampled and tested.

908.14 Anchor Bolts, Nuts, and Washers

An assembly is typically a combination of a bolt, nut, and washer but may be any combination of a bolt, nut, washer, lock washer, etc. depending on the project specifications. For Type C, D, E and J cantilevers, the sampling frequency is 1 assembly per heat, per diameter, per foundation, for a max of 3 per project. Full length bolts are required for testing but if the total length is less than 20", a second sample must be submitted for testing. Non MDOT

standard plan bolts require shop drawings along with a Mill Cert attached to the Sample ID form. Stainless steel anchor bolts are not required to be sampled and tested. Plate washers are not required to be sampled and tested.

908.14D Anchor Bolts and Nuts for Other Purposes

A General Cert is acceptable for stainless steel anchor bolts, pedestal foundations for pedestrian signals, push buttons, controller cabinets, and Hawk signals and repeaters. Anchor bolts for all other purposes require testing. An assembly is typically a combination of a bolt, nut, and washer but may be any combination of a bolt, nut, washer, lock washer, etc. depending on the project specifications. Plate washers are not required to be sampled and tested.

909.04A Reinforced Concrete Pipe

909.04B

Size of Sample - Full size units for strength test. For absorption tests, 26-inch square to 81-inch square in area from the wall of each piece of pipe tested.

Number of Samples - One percent of the number of pieces of each size.

Reinforced concrete pipe 42-inch diameter and larger may be tested by coring. Size of core will be 4-inch nominal diameter (but not less than 3 ¼ inches actual). Up to 1 percent of the number of pieces of pipe for each size, but not less than 3 pieces, will be selected for coring. One core will be drilled and tested from each of these test pieces. Reinforcement will be inspected prior to incorporation in the pipe.

909.04C Nonreinforced Concrete Pipe

Size of Sample - Same as reinforced concrete pipe.

Number of Samples - One percent of the number of pieces, but not less than 2 pieces of each size except that at the option of the department the following sampling schedule will apply for 4 inches through 24 inches in diameter sewer pipe for quantities of 500 or more:

Sampling Schedule - Per the following:

| Concrete Pipe | Number of Samples |
|---------------------------|---------------------------------|
| 500 to 1,000 pieces | 6 |
| 1,001 to 2,000 pieces | 8 |
| 2,001 to 5,000 pieces | 11 |
| Over 5,000 pieces thereof | 2 samples per 1,000 or fraction |

909.04D Precast Concrete Box Sections

The following structural steel components do not require fabrication inspection: plate washers, connection plates, and connection angles used to connect culvert segment, headwall, and wingwall.

909.04G Precast Concrete Three-Sided or Arch Culverts

The following structural steel components do not require fabrication inspection: plate washers, connection plates, and connection angles used to connect culvert segment, headwall, and wingwall.

909.05A Corrugated Steel Pipe

Size of Sample - A 6-inch by 3-inch (minimum) section cut from the pipe. The sample should be taken from the end of the pipe avoiding the seams. Care should be taken to assure the coating is not damaged during sampling. Mill Cert must be attached to the Sample ID form.

Number of Samples - Per the following:

| Diameter of Pipe | Quantity Represented (maximum) |
|-----------------------------|--------------------------------|
| 12 inches or less | 2500 ft |
| 15 inches through 54 inches | 1000 ft |
| 60 inches and over | 500 ft |

Less than 5 percent of the quantity in the above table may be visually inspected.

909.05A1 Corrugated Galvanized Steel Sheets

Size of Sample - One strip the full width of the sheet and 3 ½ inches in the direction of the length of the sheet. The strip may be cut from the end of the sheet for material coated in coils. If the sheets were individually coated after being cut to length, as indicated by heavy accumulations of zinc at one end, the sample strip shall be cut from the end opposite the heavy accumulation and after cutting 4 inches from the end of the sheet. Mill Cert must be attached to the Sample ID form.

Number of Samples - Per the following:

| Diameter of Pipe Represented (max) | Length of Sheet | Quantity |
|------------------------------------|---------------------------|----------|
| 12 inches or less | 44 inches or less | 2500 ft |
| 15 through 54 inches | 50 to 175 inches, approx* | 1000 ft |
| 60 inches and over | 190 inches and over* | 500 ft |

*Larger pipe may be made from combination of shorter sheets. Less than 5 percent of the quantity in the table above may be visually inspected.

Note: Normally each heat and thickness is to be sampled. Exception may be made where quantities are limited and/or mixtures of heat numbers are excessive.

909.05B Corrugated Aluminum Alloy Sheets

Size of Sample - A transverse strip full width of the sheet and at least 3 inches in length cut from the end of the sheet.

Number of Samples - A sample shall be taken from each of 3 different sheets for lots weighing 5 tons or less, from 4 sheets for lots weighing more than 5 tons and less than 10 tons, and from 5 sheets for lots weighing 10 tons or more.

910.03 Geotextiles

Sampling Frequency - Obtain samples to represent the required quantity of geotextile according to the following schedule:

| Geotextile | First Sample | Additional Samples |
|-------------------------|-----------------|--------------------|
| Blanket | 500 to 1500 syd | 7,500 syd or less |
| Liner for Riprap | 500 to 1500 syd | 5,000 syd or less |
| Separator/Stabilization | 500 to 1500 syd | 25,000 syd or less |
| Liner for Heavy Riprap | 500 to 1500 syd | 4,000 syd or less |

Maximum for VI - 500 syd (4500 sq ft)

Size of Sample - Sample must be a minimum of 75 sft, taken across the full roll width. For rolls over 15 ft wide, sample must be a minimum of 5 ft long, taken across the full roll width.

Geotextile samples submitted for testing must be identified with the lot number and/or roll number, the name of the manufacturer, and the product or style number.

Notes:

Geotextiles must be unwrapped one full roll circumference prior to sampling.

Geotextiles must be rolled, not folded, and shipped in a manner to prevent creases in the fabric.

910.05 Drainage Geocomposites

Size of Sample –

Filter wrap geotextile sample must be a minimum of 75 sft, taken across the full roll width.

Polymer core sample must be a minimum of 6 ft long, taken across the full roll width.

Coupon of the assembled drainage geocomposite must be a minimum of 1 ft long, taken across the full roll width.

Notes:

Manufacturers and suppliers must provide separate samples of filter wrap geotextile and polymer core for testing. These samples must be taken from the same production lot as the assembled drainage geocomposite intended for use on the project.

Include a coupon of the assembled drainage geocomposite when the separate components are submitted for testing.

Assembled coupon and component samples of the drainage geocomposite submitted for testing must be identified with the lot number and/or roll number, the name of the manufacturer, and the product or style number.

914.07 Load Transfer Assemblies; Dowel Baskets

Field Inspection required per Chapter 3.04 of the Materials Quality Assurance Procedures Manual. A Powerpoint in Division 602 of the Construction Manual has been created to assist with the field inspections. Form #0553 is to be used to document the inspections.

Assemblies must meet the requirements of Standard Plan, R-40-I.

All shipments of load transfer assemblies will be accompanied by proper certification documentation.

- Certification from steel (dowel bar) manufacturer.
- Certification from epoxy coating company.
- Documentation of epoxy coating.
- Certification from assembly manufacturer.
- Documentation of bond release.

When shipment is made to a project, each bundle will bear a legible tag with the following information:

- Assembly manufacturer name and plant location.
- Control section/project number.
- Lot number or other identification that will also be shown on the accompanying certification.
- Supplier and/or contractor's name.

Misc. #3 Clay Pipe

Normal Sampling Frequency - One percent of the number of pieces, but not less than 2 pieces of each size except that at the option of the department the following sampling schedule will apply for 4-inch through 24-inch diameter sewer pipe for quantities of 500 or more:

Sampling Schedule - Per the following:

| Clay Pipe | Number of Samples |
|---------------------------|---|
| 500 to 1,000 pieces | 6 |
| 1,001 to 2,000 pieces | 8 |
| 2,001 to 5,000 pieces | 11 |
| Over 5,000 pieces thereof | 2 samples per 1,000 or fraction thereof |

Size of Sample - Full size units for strength test. For absorption tests, 26 inches square to 82 inches square in area from the wall of each piece of pipe tested.

Approved Suppliers

The firms listed in this section have received written permission from the Construction Field Services Division to recertify material for use on Michigan Department of Transportation projects. Supplying materials is also allowed by manufacturers listed in the Approved Manufacturers List.

When recertification of any materials is made by any firm not found on this list, please notify the Construction Field Services Division, Materials Control, immediately.

See also Section 2.02 of the Materials Quality Assurance Procedures Manual.

Qualified Products List

The materials in this section may be accepted for use on Michigan Department of Transportation projects based on the trade name, model number, etc., as listed.

This Qualified Products List is in accordance with the 2020 Standard Specifications for Construction.

Also see Section 5.01 of the MQAP Manual.

Spec. 903 Admixture Notes:

1. Dosage Rate

The dosage rate indicated is that recommended by the producer or that used in qualification tests for approval of the admixture. There is no assurance that the desired water-reduction and/or retardation will be achieved with these dosages with a particular cement being used, as the effect is dependent on the cement chemistry, concrete temperature, and other factors. Increasing the dosage appreciably above that recommended may result in abnormal behavior of the concrete, such as extremely long or very short setting times. Reducing the dosage below that recommended may have the effect of substantially no change from concrete without the admixture. The dosage shown for retarding admixtures will normally produce a 1- to 3-hour retardation in the setting of the concrete, compared to similar concrete without the admixture, when used at normal temperatures (approximately 70°F). Increased dosage, within reasonable limits, will usually increase the retardation. Use of a retarding admixture will not slow the stiffening of concrete due to loss of slump.

2. Air-Entraining Admixtures

The contractor is responsible for verifying the compatibility of all chemical admixtures and the air-entraining admixture. If admixtures are from more than one manufacturer, run a trial batch prior to concrete placement. Provide test results for slump, air-entrainment and seven-day compression for two (2) cylinders. Actual dosage for Air-Entrainers may vary from those listed on the Qualified Products List as required by the mix design.

3. Lignin Type Admixtures

Lignin (or lignosulfonate) admixtures typically will cause the entrainment of additional air in air-entrained concrete. This type admixture does not generally entrain air by itself, but makes other air-entraining materials much more efficient. Thus, a change in dosage of either the chemical admixture or the air-entraining admixture may have a more significant effect on the air content than normally expected. It is the contractor's responsibility to be sure the specific admixture proposed for use is compatible with his operations so that excessive air content in the concrete is not developed. Most lignosulfonate type water-reducers will provide a moderate retardation if used at higher dosage rates.

4. High-Range Water-Reducers

Type F and G high range water-reducing (HRWR) admixtures (frequently called "superplasticizers") are capable of greater water reduction and greater strength gain than regular Type A water-reducers, or can provide substantial increase in slump while maintaining a cohesive concrete without loss of strength. Type G admixtures will also provide retardation of setting similar to Type D admixtures. Problems with this type of admixture include the following: (a) Loss of slump is frequently much more rapid than with plain concrete or when other admixtures are used, especially for older formulations of superplasticizers; (b) Effectiveness depends on the chemistry of the Portland cement, and the cements generally available in Michigan do not have the most favorable chemistry; (c) The air-void system may be adversely affected. Type F and G admixtures are to be used only according to the provisions of the Standard Specifications.

5. Admixtures Containing Chlorides

Some Type A and D admixtures may contain chlorides, as noted in the above listing. Section 903.03 of the Standard Specifications permits the use of these admixtures, except they are prohibited in concrete for bridge superstructure, prestressed concrete, and concrete containing galvanized steel or aluminum.

Selecting and Shipping Samples

The following instructions will apply for the selection, identification, and shipment of samples unless otherwise specified:

1. Samples shall be selected with care and shall be representative of the material sampled.
2. Pack samples to withstand rough shipment. Liquid materials shall be shipped in screw-top cans or friction-top cans with lids soldered in place unless otherwise specified or required. Friction-top cans with lids not soldered in place and glass jars must be surrounded and packed with suitable absorbent material in sufficient quantity to absorb all the liquid if the tops of the cans should come off or the glass jars should become broken. All packages containing liquid samples shall be marked "Fragile-Liquid."

Mark pipe, tile, and concrete test specimens conspicuously, "Handle with Care-Fragile."

3. The sample identification form must be legibly prepared and filled out in detail. All available information for proper identification of the sample shall be given including the lot number, batch number, serial number, or other identification marks.

The sample identification form shall be securely attached to the container in which the sample is shipped by means of a tag envelope. Also, include duplicate identification sheet inside wrappings, or if shipped in cloth sack, inside the sack.

4. Aggregate samples shipped to the Testing Laboratory shall be shipped in a closely woven bag. Do not use sacks which have contained sugar.
5. Cement and Pozzolanic Admixtures shall be shipped in plastic lined cloth bags.
6. The method of transportation of the samples will depend on the size, weight or quantity of material being shipped, and the time element. Small and light-weight samples shall be sent via UPS, bus, parcel post, or express. Large and heavy-weight samples shall be sent by motor freight. The sampler, being familiar with conditions, shall make shipment in the manner deemed most appropriate and economical.
7. Cloth bags, plastic liners, screw-top cans and friction-top cans may be obtained from the Laboratory. All containers must be clean and free from foreign materials. Cloth bags or sacks must be clean, free from tears or holes, and tightly woven to prevent loss of fine material.
8. All samples shall be consigned to the Michigan Department of Transportation, Construction Field Services Division, Secondary Governmental Complex, 8885 Ricks Road, Lansing, Michigan 48909, unless otherwise noted.

Appendix

Visual Inspection Items - Alphabetical

This list is intended as a quick reference, alphabetical by material name, for materials which normally require some form of testing but have VI quantities listed. It does not include materials which are accepted by VI basis only.

Visual Inspection Items - By Specification Number

This list is intended as a quick reference, by specification number for materials which normally require some form of testing but have VI quantities listed. It does not cover materials which are accepted on a VI basis only.

This Visual Inspection Items List is in accordance with the 2020 Standard Specification for Construction.

Visual Inspection Items - Alphabetical

| SEC. | Material | Maximum V.I. |
|-------|---|--------------------------|
| 909 | Acrylonitrile-Butadiene-Styrene (ABS) Pipe for Underdrain | 600 ln ft |
| 919 | Aluminum Sheet | 100 sq ft |
| 902 | Aggregate, Coarse | 100 tons |
| 902 | Aggregate, Dense-Graded | 500 tons |
| 902 | Aggregate, Fine | 100 tons |
| 902 | Aggregate, Open-Graded | 100 tons |
| 904 | Asphalt, Liquid (RC-250) | 5 gal - 150 lbs |
| 905 | Bar Reinforcement (all) | 500 lbs |
| 914 | Bituminous Fiber Joint Filler | 150 sq ft |
| 914 | Bolts for Structure Exp. Anchor | 250 units |
| 914 | Bond Release | 20 gal max |
| 922 | Calcium Chloride Solids | 5000 lbs |
| 922 | Calcium Chloride Solutions | 1000 gals |
| Misc. | Cast & Ductile Iron Pipe | 250 ft |
| 901 | Cement | 45 tons |
| Misc. | Clay Pipe | 10 pcs |
| 913 | Clay and Sand Lime Brick | 1000 pcs |
| 913 | Concrete Block | 1000 pcs |
| 913 | Concrete Brick | 1000 pcs |
| 909 | Concrete Pipe, Non-Reinforced | 10 pcs |
| 909 | Concrete Pipe, Reinforced & Elliptical | 5 pcs of 42" dia or less |
| Misc | Corrugated Galv. Steel Plates | 10 plates |
| 909 | Corrugated Aluminum Sheets | 25 sheets |
| 909 | Corrugated Aluminum Alloy Pipe | 250 ln ft |
