Premises Entered field: Only entered with Burglary Offenses

The Michigan Incident Crime Reporting program collects this data from incidents including burglary offenses 22001 (Burglary Forced Entry) and 22002 (Burglary Entry without Force) at rental storage facilities or hotels/motels. This two-digit number represents the number of individual burglarized premises in one incident report.

Rental Storage Facility
A storage facility was burglarized; the storage facility reported the crime. The suspect entered eight separate units; each rented out by different people. There is only one location site (the storage facility); enter "08" as the number of premises to reflect the eight different burglarized units. If each renter reported the crime, create eight separate incidents each reflecting one burglary at one premise.

Hotel / Motel
A hotel was burglarized. The suspect entered eleven different rooms. There is only one location site (the hotel); enter "11" as the number of premises to reflect the eleven different burglarized rooms. With the occupants being transient, the hotel manager will most likely report the one incident.

Apartment / Condo – Do NOT enter Premises Entered data
An apartment building was burglarized. The suspect enters three different apartments. These units are occupied by permanent residents. Each apartment renter, or condo owner, is likely to make an individual report. Create three incidents each listing one burglary. The Premises Entered field is not utilized because apartments and condos are coded as "Residence/Home".
